

Name of Student: YOUSSEUF ISSAKA BORGOU	PRN:25070122090
Semester: III	Year : AY 2026-27
Subject: Programming with Java	
ASSIGNMENT No : 6	
TITLE : Inner and Anonymous Classes	

Problem Statement

Write a Java program to demonstrate the use of an inner class, an anonymous class.

Learning Objectives

To implement inner classes and anonymous classes for improving encapsulation and event handling in Java.

Programme

```
class outhere
{
    private String message=(" haiga mon ame soeur tu es sous la protection
divine");
    class inner
    {
        public String m=(" this is in inner class");
        void display()
        {
            System.out.println("here is inside the display");
        }

        void show()
        {
            System.out.println("message is :"+message);
            System.out.println("message  :"+m);
            System.out.println("ici c est la partie de show");
        }
    }
}
class animal
{
    void sound()
    {
        System.out.println("make sound beaucoup");
    }
}
public class InnerAnonymousDemo
{
```

```

public static void main(String[] args)
{
    outhere a = new outhere();
    outhere.inner in = a.new inner()
    {
        void display()
        {
            System.out.println("haiga");
            super.display();
        }
        void show()
        {
            System.out.println("fatime");
            super.show();
        }
    };
    in.display();
    in.show();
    animal s = new animal()
    {
        void sound()
        {
            super.sound();
            System.out.println(" c  est ici");
        }
    };
    s.sound();
}
}

```

Output

```

PS C:\CS-JAVA> javac InnerAnonymousDemo.java
PS C:\CS-JAVA> java InnerAnonymousDemo
haiga
here is inside the display
fatime
message is : haiga mon ame soeur tu es sous la protection divine
message : this is in inner class
ici c est la partie de show
make sound beaucoup
c  est ici
PS C:\CS-JAVA> 

```

Conclusion

Here I create a class named outhere inside that class I create one more class named inner in which I give a string variable et has its constructors display and show in this constructor (show) I print the string defined inside outhere class. I create too one more class animal.

In the public class

I create object of other class , and inner class using object of outer because inner is inside outer class and I create also object of animal class. And at the end I did anonymous of animal class and inner class using super to call all constructor of their classes and adding too new feature on the anonymous part
