

Name of Student: youssouf issaka borogu	PRN:25070122090
Semester: III	Year : AY 2026-27
Subject: Programming with Java	
ASSIGNMENT No : 11	
TITLE : Interface Implementation	

Problem Statement

Write a Java program to demonstrate the implementation of interfaces.

Learning Objectives

To implement interfaces for achieving abstraction and multiple inheritance of type.

Programme

```
interface Animal
{
    void sound(); // abstract method
}
class Dog implements Animal
{
    public void sound()
    {
        System.out.println("dog barks ");
    }
}
class chat implements Animal
{
    public void sound()
    {
        System.out.println("chat crie means cat ");
    }
}
class matou extends chat
{
    public void sound()
    {
        System.out.println("matou is cat in other language ");
    }
}
public class Interface
{
    public static void main(String[] args)
    {
```

```
Animal a = new Dog();
Animal b = new chat();
chat m = new matou();
a.sound();
b.sound();
m.sound();
}
```

Output

```
dog barks
chat crie means cat
matou is cat in other language
PS C:\CS-JAVA>
```

Conclusion

In conclusion, an interface provides a simple way for users to interact with a software system. It makes the application easier to use by allowing users to give inputs and view outputs. A well-designed interface improves user experience, efficiency, and accessibility.
