

Name of Student: youssouf issaka borogu	PRN:25070122090
Semester: III	Year : AY 2026-27
Subject: Programming with Java	
ASSIGNMENT No : 12	
TITLE : User-Defined Packages	

Problem Statement

Write a Java program to create and use user-defined packages.

Learning Objectives

To create and use user-defined packages for organizing Java programs.

Programme

Package1:square(it is not in the same folder with main function nor with my rectangle)

```
package square;

public class Square {
    public Square()
    {
    }
    public int displayarea(int var1) {
        return var1 * var1;
    }
}
```

Package2:myrectangle(it is not in the same folder with main function)

```
package myrectangle;

public class Rectangle {
    public Rectangle() {
    }
    public int show(int var1, int var2) {
        return var1 * var2;
    }
}
```

Main function(import packages

```
import square.Square;
import myrectangle.Rectangle;
public class Main
{
    public static void main(String[] args)
    {
        Square s = new Square();
        System.out.println(s.displayarea(6));
        Rectangle r = new Rectangle();
        System.out.println(r.show(5, 6));
    }
}
```

Output

```
PS C:\CS-JAVA> javac Main.java
PS C:\CS-JAVA> java Main
36
30
PS C:\CS-JAVA> 
```

Conclusion

In conclusion, this program demonstrates the use of **Java packages and interfaces between classes**. The Square and Rectangle classes are placed in separate packages and are imported into the Main class. The program successfully creates objects from both packages and calculates the area of a square and a rectangle. This shows how packages help organize Java programs and allow classes to be reused in other classes.
